# LeadBells

AI Leads Follow up, tracking & calling software

LeadBells takes every lead from the moment it arrives to a booked meeting - automatically. The AI calls within seconds, qualifies the lead, follows up on WhatsApp, books the meeting in the salesperson's calendar, reminds the customer, and rescues no-shows. Your team only talks to leads that are ready.

## How it works - step by step

| | |
|---|---|
| 1 | **Lead comes in**<br>Added manually, imported from Excel/CSV, captured by the website chat widget, sent by a form/API/webhook, or found by Leads Scrap AI. |
| 2 | **AI calls within seconds**<br>The AI agent dials the lead immediately (inside your calling hours), one lead at a time, in a natural human-like Indian voice (English / Hindi / Hinglish). |
| 3 | **No answer? WhatsApp + retry**<br>A 'missed call' WhatsApp goes out at once and the AI tries again later, up to the limit you set. |
| 4 | **Qualify on the call**<br>Requirement, budget, timeline and decision-maker are captured. Every call is recorded, transcribed and summarised. |
| 5 | **Book, transfer or call back**<br>On the same call the AI books a meeting, schedules a callback, or transfers live to a named person (sales, support, founder...). |
| 6 | **WhatsApp after every call**<br>Thank-you message with the meeting date/time and the salesperson's name & phone, or the agreed callback time, or the details the AI promised on the call. |
| 7 | **Hot lead to a salesperson**<br>Interested leads are marked hot, assigned to a salesperson and a follow-up task is created with a deadline. |
| 8 | **Salesperson calls (recorded)**<br>Click-to-call from the dashboard; the call is recorded and transcribed and the AI suggests the next action. |
| 9 | **Overdue? Manager alerted**<br>Tasks past their deadline escalate to the manager automatically. |
| 10 | **Meeting reminders**<br>The customer gets WhatsApp/e-mail reminders a day before and an hour before; the salesperson gets a nudge. |

| | |
|---|---|
| 11 | **No-show rescue**<br>If the customer does not turn up, they get a 'we missed you' WhatsApp and the AI calls to fix a new time - and moves the meeting itself. |
| 12 | **Cold leads re-engaged**<br>Leads that go quiet get a WhatsApp check-in and an AI call again after a set number of days. |
| 13 | **Pipeline updated live**<br>Lead -> Contacted -> Interested -> Follow-up -> Meeting -> Won / Lost - every change visible in real time. |

# Feature list

## 1. Lead capture

- Manual lead entry with custom fields and tags
- Excel / CSV import (Name, Phone, Email, Description) - with 'AI calls every lead' option
- Website chat widget that captures and qualifies visitors
- Webhooks and REST API (API keys) for forms, landing pages, ads and third-party tools
- Leads Scrap AI - prospecting from social platforms and public sources
- Automatic de-duplication by phone/e-mail and lead source tracking
- Lead scoring and temperature (cold / warm / hot)

## 2. AI calling agent

- Calls every new lead within seconds, strictly one call at a time
- Human-like voice; slow clear greeting, then normal Indian conversational pace
- English, Hindi and Hinglish; numbers and amounts spoken in words
- Dynamic behaviour per lead: stage, history, description and brief are used on every call
- Playbooks - different script, tone or language for different kinds of leads
- Calling hours, retry count and retry delay per workspace
- Bulk AI call for selected leads - now or scheduled
- Live transfer to named humans (name, number, role) or to the assigned salesperson
- In-call appointment booking and callback scheduling
- Call recording, transcript, summary, sentiment, objections and next-action analysis
- Realtime call status in the dashboard: queued, ringing, on call, transferring, ended
- Test call button to hear the agent before going live

## 3. WhatsApp automation (Twilio)

- Missed-call message when the lead does not answer
- Thank-you message after every answered call
- Appointment confirmation with date, time, salesperson name and phone
- Callback confirmation with the agreed time
- Details promised by the AI on the call are delivered automatically
- Meeting reminders (day before / hour before) and 'we missed you' messages
- Check-in messages for cold leads
- Approved WhatsApp templates, editable message text per workspace

## 4. Follow-up & task management

- Automatic follow-up tasks from every call outcome
- Due-now nudges to the salesperson; overdue escalation to managers
- Task cards with lead, phone, due time and one-tap complete / reschedule
- AI decides the next action after human calls too
- Cold-lead re-engagement after N days (WhatsApp + AI call)

## 5. Appointments & calendar

- Meetings booked by the AI, by the team or by visitors in the widget
- Google Calendar sync for every salesperson with Google Meet links
- Free/busy check - the AI only offers slots that are actually free
- E-mail confirmation with calendar invite (.ics), reschedule and cancellation e-mails
- Reminders to the customer and the salesperson
- No-show detection, 'did it happen?' prompt, auto no-show and AI rescue call
- Reschedule history and one-click mark done / no-show

## 6. Human calls

- Click-to-call from the lead page (bridged through Twilio)
- Recording and transcription of salesperson calls
- AI summary and suggested next step after each human call
- Call notes, outcomes and manual call logging

## 7. Pipeline & CRM

- Kanban pipeline: Lead, Contacted, Interested, Follow-up, Meeting, Won, Lost
- Lead timeline: calls, WhatsApp, tasks, status changes, notes
- Assignment rules (round-robin / manual) and ownership
- Filters, search, tags, custom fields and bulk actions

## 8. Team, roles & notifications

- Roles: Admin, Sales Manager, Salesperson, Viewer
- Salespeople see only their own leads, tasks and calendar
- In-app, push and e-mail notifications; Slack / Teams webhooks
- Manager alerts for hot leads, overdue follow-ups and call summaries

## 9. Dashboard & analytics

- Live dashboard: calls today, hot leads, meetings, overdue tasks
- Call statistics: connect rate, outcomes, duration, cost
- Pipeline and conversion reporting; visitor tracking for the website

## 10. AI chat & knowledge base

- AI chat agents for the website widget with handoff to humans
- Knowledge base from documents, URLs and FAQs
- AI automation rules and workflows for follow-ups

## 11. Settings, security & platform

- Workspace branding: logo and name across the dashboard
- Per-workspace API credentials vault (AI, Vapi, Twilio, Google, SMTP...) - secrets encrypted
- Calling settings, playbooks, transfer destinations and reminder rules in one place
- Multi-tenant SaaS with plans, billing and an owner console
- Audit logs, consent logs, data export and account deletion
